Election/Restrictions

1. Applicants' amended claims filed July 24, 2003 encompass multiple independent sequences. Said sequences comprise multiple inventions as outlined below. Although an Office action on the merits has been issued, applicants' amendment necessitates the following restriction to one of the inventions as defined below as required under 35 U.S.C. 121:

Pursuant to 35 U.S.C. 121 and 37 C.F.R. 1.141, the sequences encompassed by the language of claim 1 are subject to restriction. The Commissioner has partially waived the requirements of 37 C.F.R. 1.141 and will permit a reasonable number of such nucleotide sequences to be claimed in a single application. Under this policy, up to 10 independent and distinct nucleotide sequences will be examined in a single application. (see MPEP 803.04 and 2434)

Claim 1 recites a compound 8 to 50 nucleobases in length targeted to distinct regions of the target sequence CD36L1 of SEQ ID NO: 3, identified by nucleobase. Such language is considered to encompass multiple discrete sequences, because no single compound is capable of meeting all the limitations of the claim. Furthermore, although all such sequences encompassed in claim 1 each target and modulate expression of the target sequence CD36L1 of SEQ ID NO: 3, these sequences are considered to be unrelated, since each sequence encompassed by said claim is structurally and functionally independent and distinct for the following reasons: each sequence necessarily has a unique nucleotide sequence, each sequence targets a different and specific region of the molecule encoding CD36L1, and each sequence, upon binding to the molecule encoding CD36L1, functionally modulates (increases or decreases) the expression of the gene and to varying degree (per applicants' Table 1 in the specification). Furthermore, a

Art Unit: 1635

search of more than one of the sequences encompassed by the language of claim 1 presents an undue burden on the Patent and Trademark Office due to the complex nature of the search and because a search for art against one region would not reveal art against another. In view of the foregoing, one target region of the instantly claimed target sequence is considered to be a reasonable number of sequences for examination. Accordingly, applicants are required to elect one target region of the instantly claimed sequence from claim 1.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
